an Epic GARDENING Brand

Let us inspire and educate the gardener in you.™

A new generation of gardening

My name is Kevin Espiritu, the founder of Epic Gardening, and I'm thrilled to present you with the newest edition of the Botanical Interests seed catalog.

In late 2022, Botanical Interest's founders, Judy & Curtis, passed the reins of their incredible seed business to Epic Gardening. You might be wondering, "Why Epic?" The answer is simple: a shared mission and vision.

Both our companies are deeply rooted in educating, inspiring, and nurturing the gardener within every individual. Epic Gardening's journey began with the aspiration to teach the world to grow. And Botanical Interests? They've been the go-to source for beautiful, informative seed packs with some of the highest germination rates in the industry for almost 30 years.

Our 2024 edition of the catalog breathes life into our combined aspirations. We've leaned into attracting beneficial insects with a diverse selection of flowers, ensuring not just beauty in your garden but sustainability and balance. Every flower you'll find here is not just a splash of color but a promise to the ecosystem.

Moreover, for those of you who are more edible-minded, we've fortified this section with growing tips sourced from real gardening experiences and knowledge. From the charm of heirlooms to the promise of bountiful yields, you'll find epic varieties and growing tips on every page. And to those considering or already committed to raised bed gardening? You'll enjoy some of our new product additions.

I understand the deep respect and trust you've placed in Botanical Interests over the years. I assure you that the heart of Botanical Interests remains unchanged. Our combined vision is to seamlessly blend the best of both worlds. Epic Gardening's hands-on, practical tips are now interwoven with the beautiful, inspirational seed selections and packets that Botanical Interests has always been known for.

To the seasoned gardeners, may you find renewed vigor and fresh ideas within these pages. And to those just embarking on your growing journey, I promise, this catalog and our collective knowledge will be your steadfast companions. Let this be the start of a new generation of gardening—where we come together, learn from one another, and cultivate not just plants but a global community of gardeners.

Keep on growing,

Kevin E.

All of our seeds wear the Non-GMO Project Verified logo

Botanical Interests is committed to natural seeds, which means we do not sell genetically engineered (also known as genetically modified organisms or "GMO") seeds, and we signed the Safe Seed Pledge many years ago to make that commitment clear. Additionally, we are Non-GMO Project Verified, which means our seeds are tested by the Non-GMO Project for GE/GMO gene contamination that can occur from cross pollination by pollinators or wind. Our seeds are never treated with pesticides, fungicides, or other harmful chemicals, either. As organic gardeners ourselves, we wanted to make organic gardening accessible by providing an ever-expanding selection of certified organic varieties. We sell tested, clean, natural, healthy seeds so you can grow clean, natural, healthy plants for your family to eat or for the birds, bees, and butterflies to enjoy.

27 New varieties

New varieties arrive every season in July.
Visit our website for up to date inventory.

Snapdragon
Orange Wonder
Brilliant orange blooms tipped with rosy pink will glow like a sunset in your garden bed.
See page 80

Gourd Hard-Shelled
Speckled Swan
Deep green gourds are charmingly speckled, and their curved, swan-like necks add a touch of whimsy to fall decor.
See page 65

Cabbage
Caraflex
This petite cabbage is the perfect portion for smaller servings of salads or slaws.
See page 11

Nasturtium Trailing
Purple Emperor
Fit for a king, this trailing nasturtium sends blooms in deep shades of burgundy and antique rose pink across your garden.
See page 75

Tomato Bush
Cream Sausage
Beautiful ivory color draws attention, but its balanced, buttery, and rich flavor will make it a staple in your garden!
See page 44

Sensitive Plant
This dramatic wonder responds to touch by folding in its leaves and drooping its branches right before your eyes!
See page 79

Eggplant
Jewel Amethyst
A compact plant with huge harvests of tiny fruit, well-suited for a container garden.
See page 17

Vegetables

Amaranth
Edible Red Leaf

AMARANTH

Amaranthus tricolor
Frost sensitive

Edible Red Leaf
A nutritious, heat-loving summer green that also produces high-protein seeds. Eat fresh in salads or steam like spinach. Also decorative in flower beds.
H • 49–63 days
#0146 $2.29 500mg (~800 seeds)

Artichoke
Green Globe
Improved

ARTICHOKE

Cynara scolymus
Frost tolerant

Green Globe Improved
You really can grow delicious artichokes in any climate. The large, silvery leaves and bright purple flowers are beautifully ornamental, too.
150–180 days
#0267 $2.29 18 seeds

Arugula | Rocket
Astro

Arugula | Rocket

Arugula
Wild Rocket

Arugula
Wild Rocket
Rocky

ARUGULA | ROCKET

Eruca vesicaria
Frost tolerant

The flavor of arugula will add spice to any salad; or indulge in a salad of only arugula. Delicious!
H • 20–45 days
#3041 Organic $2.29 1g (~400 seeds)
#7612 Organic Large $4.59 3g (~1,210 seeds)

Astro
'Astro' has stellar qualities! Slower-to-bolt, wider leaves, and a milder flavor when young all make for a real winner. An excellent cut-and-come-again crop.
32–55 days
#3101 Organic $2.99 750mg (~300 seeds)

ARUGULA | WILD ROCKET

Diplotaxis tenuifolia
Frost tolerant

If you like arugula, you are going to love this one. Complex, savory flavor excites your palate when added to salads, sandwiches, and even pesto.
H • 30–50 days
#0298 $2.29 500mg (~1,680 seeds)

Rocky
Walk on the wild side with this perennial vegetable. Complex, spicy flavor and very easy to grow from seed.
H • 30–50 days
#3029 Organic $2.69 500mg (~1,680 seeds)

4 Tips for Harvesting Arugula

Arugula, also known as rocket, is a beginner-friendly green that's great in salads, on sandwiches, or as your favorite peppery garnish.

To make the most of your arugula plant, follow these harvesting tips:

Tip 1: Harvest for flavor. Young leaves have a mild flavor, while older leaves have more of a peppery bite. Use your harvest time to maximize your preferred taste.

Tip 2: Harvest single leaves. Arugula will keep producing leaves if the base of the plant stays intact. Harvest individual leaves as needed rather than removing the whole plant for a continuous harvest.

Tip 3: Harvest often. The more you harvest the leaves, the more productive the plant will be.

Tip 4: Harvest early. Trim early in the morning to help leaves retain their crunch, and use as soon as possible for the freshest flavor.

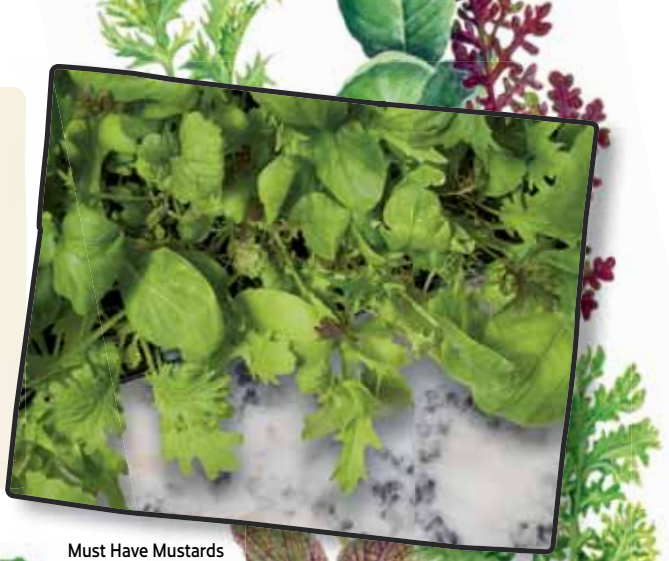

Baby Greens

Baby greens can be grown indoors at any time of year, and are a nutrient-packed way to get your "green fix" in the dead of winter. Move containers as needed for best light exposure and temperature. Harvest when 2"–4" tall and enjoy!

When to sow outside: Sowing time and soil temperature vary with varieties.

When to start inside: RECOMMENDED. Sow indoors any time of year, with indoor temperatures 60°–75°F. Use a shallow container with 1"–2" of fine seed starting mix. Sow seeds in a single layer, and cover with 1/8"–1/2" of mix, depending on variety. *Successive Sowings:* Every 2 weeks for a continual supply.

Beans

Who can resist the crisp texture and full-bodied flavor of homegrown green beans? They make such a great snack while gardening, that they often don't make it into the kitchen! Bush types produce earlier and have a shorter harvest period; pole types produce later but bear over a longer period of time. Bush beans are compact and good for containers.

When to sow outside: RECOMMENDED. 1 to 2 weeks after your average last frost date, and when soil temperature is at least 65°F, ideally 70°–85°F. *Successive Sowings:* Every 7 to 14 days up to 80 days before your average first fall frost date. **NOTE:** In very hot summer areas, skip sowing as high heat approaches; temperatures consistently above 90°F will prevent beans from forming.

BOK CHOY

Brassica rapa subsp. *chinensis* (unless noted)
Frost tolerant

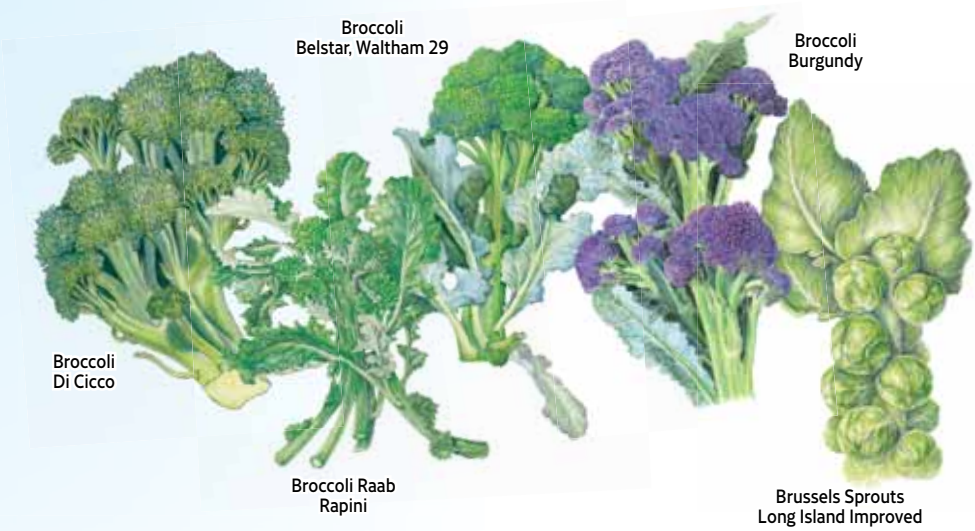

Baby Choi
Soft leaves and crunchy, white stems have a very mild flavor. Makes a beautiful, single-serving presentation harvested when small.
35–60 days
#3031 Organic $2.69 700mg (~170 seeds)

Choko (hybrid)
Now you can enjoy fresh-from-your-garden baby bok choy all summer. 'Choko' is heat-tolerant with pale green stems and vase-shaped uniformity. Perfect for pickling, stir frying, and more!
50–55 days
#0136 $2.29 300mg (~105 seeds)

Toy Choy (hybrid)
All the flavor and crispness of standard varieties in a smaller package. Tolerates warm weather better than full-size types.
30–35 days
#0247 $2.99 150mg (~65 seeds)

Bok Choy

We decided to try growing Botanical Interest's bok choy and just love it. It is tender, delicious and hardy. We grew it all season in our garden and then because we loved it so much, we decided, at the end of the season, to pull up the plants and replant them in our greenhouse (thinking it would never work). Much to our joy they took off like crazy and we enjoyed delicious bok choy through most of the winter. This bok choy will be a regular in our garden going forward. Thank you Botanical Interests for another winner! – Holly, MI

Tatsoi

Rosette
Brassica rapa subsp. *narinosa*
Not only an heirloom, but an ancient vegetable! Great for salads and stir-fries. Also known as "spoon mustard" because of the leaf shape.
H • 45 days
#3033 Organic $2.29 700mg (~305 seeds)

BROCCOLI

Brassica oleracea var. *italica*
Frost tolerant

Belstar (hybrid)
'Belstar' is truly a star in any climate! This widely-adapted, compact broccoli handles heat stress better than most and delivers great side-shoot production.
65–70 days
#3181 Organic $4.29 25 seeds

Burgundy (hybrid)
Broccoli has never been so beautiful! 'Burgundy' is quick to produce and continues tender side-shoot production for a long harvest period.
68–75 days
#0082 $4.29 10 seeds

Di Cicco
Introduced in 1890, this delizioso, reliable Italian heirloom produces an abundance of small to medium florets.
H • 48 days
#3056 Organic $2.49 1.5g (~410 seeds)

Waltham 29
The ancient Romans loved broccoli for its flavor. Today we know it's packed with nutrition, too. Health food straight from your garden.
H • 75 days
#0221 $2.29 1.5g (~360 seeds)

Cabbage

These heads wear many hats—red, green, wrinkled and crinkled, or upright and strong. Cabbage grows best in fertile, rich soil with good drainage, consistent moisture, and full sun. Temperatures consistently below 50°F or above 75°F may cause bolting. Cabbage "heads up" in cool weather and is sweetened with a nip of frost. Therefore, plan your sowing based on the best weather for harvesting. For example, if your temperatures are cooling in late summer to fall and you want to harvest in mid-October, then a cabbage that takes 120 days should be direct sown in mid-June or transplanted out in July. If your temperatures aren't cool until January, you would want to direct-sow the same variety in September or transplant seedlings out in October. Varieties with short days to maturity are the best candidates for spring sowing.

When to sow outside: For head cabbage: Usually 4 to 6 weeks before your average last frost date for a summer crop, or 10 to 12 weeks before your average first fall frost date for a fall crop.

When to start inside: RECOMMENDED. 6 to 8 weeks before your average last frost date, transplanting 2 to 4 weeks before your average last frost date. For fall crop, 4 to 6 weeks before transplanting outdoors in summer. Ideal soil temperature for germination is 75°–85°F. *Mild Climates:* Sow in fall for a cool-season harvest. Use row cover at sowing or transplanting to protect from pests, and mulch to keep roots moist and cool.

Quick and easy to grow with a mild sweet flavor compared to Western head cabbage. Delicious in salads, stir-fries, or wraps.
50–55 days
#0276 $2.69 300mg (~80 seeds)

Double-Sowing Cabbages

Like other brassicas, cabbages are slow-growing and favor cool weather. In milder climates, cabbage is a wonderful fall crop that can be grown twice yearly in spring and fall. Spring-sown cabbage matures for early summer salads and slaws. A fall cabbage crop can be stored for up to six months in cool, moist conditions—a great way to get your Vitamin C over the winter.

Cabbage's long shelf life makes it a staple for staving off scurvy in many cultures worldwide. Not only can it be stored whole, but diced and pickled or fermented—think kimchi, sauerkraut, curtido, or many other regional preparations. Cabbage can be part of a healthy diet all year round.

Our One Kilo Slow Bolt Napa Cabbage is ideal for fall sowing when the soil is still warm. The Copenhagen Market Cabbage is slightly quicker to mature for those with shorter springs or falls.

Sow cabbages in rich soil amended with compost, or plant them following your peas and beans. Just leave the roots of your legumes in the soil so the cabbages benefit from the nitrogen fixed in their roots.

Learn more about cabbage growth stages.

Carrots

Once used to color butter, the dye obtained from carrots, called carotene, is quite strong; it has been reported that people who eat large quantities of carrots may take on some of the color in their skin. Perhaps you really "are what you eat"!

When to sow outside: RECOMMENDED. 2 to 4 weeks before your average last frost date, and when soil temperature is at least 45°F, ideally 60°–85°F.
Successive Sowings: Every 3 weeks until 10 to 12 weeks before your average first fall frost date. *In very warm climates*, carrots are grown primarily in fall, winter, and spring.

Calliope Blend
What fun to grow colorful carrots! Kids and adults alike will eagerly anticipate the harvest of these nutritional, flavorful roots.
65–75 days
#0255 $2.69 500mg (~250 seeds)

The four primary groups of carrots.

Carnival Blend
Dare to be different! A colorful surprise in the garden and on the table, this fun mix is high in nutrition.
65–75 days
#3115 Organic $3.49 500mg (~250 seeds)

Cosmic Purple
Out of this world! Dazzling purple conceals the beautiful orange, crunchy interior loaded with sweet flavor.
70 days
#0206 $2.69 500mg (~250 seeds)

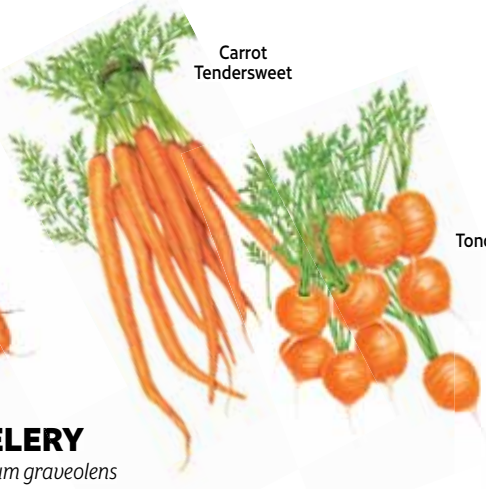

Danvers 126
In addition to classic flavor, 'Danvers 126' is excellent in heavy soils, is heat-tolerant, and is resistant to cracks and splits.
H • 65 days
#3016 Organic $2.69 1g (~510 seeds)
#7614 Organic Large $5.59 3g (~1,520 seeds)

Little Finger
A true mini-carrot, perfect for containers. Developed to have deep orange color and sweet flavor when harvested small.
H • 57 days
#3105 Organic $2.49 750mg (~380 seeds)

Rainbow (hybrid)
Grow a beautiful array of carrots all from one type of seed! Since this is one cultivar, these carrots mature to the same size and have the same shape, making them easy to process and oh-so-pretty pickled in a jar!
67 days
#0015 $3.49 400mg (~200 seeds)

Red Cored Chantenay
This excellent Chantenay type is crisp and sweet with rich, reddish-orange color. An 1800s French heirloom enjoyed in the U.S. since 1929.
H • 65–70 days
#0277 $2.29 1g (~510 seeds)

Scarlet Nantes
This 1850s French favorite has a reputation for sweet flavor and crisp texture. Deep orange 6"–7" long roots.
H • 65 days
#3017 Organic $2.49 800mg (~410 seeds)

Shin Kuroda
This heat-tolerant, high-moisture, deep orange carrot is one of the sweetest you will ever eat! Great for storage; excellent for dense soils.
75 days
#0119 $2.29 1g (~510 seeds)

Tendersweet NEW
Uniform in size and shape with orange-red roots. Very sweet and ideal for canning, cooking, juicing, and pickling.
H • 70–80 days
#0242 $2.49 1g (~600 seeds)

Tonda di Parigi
Sweet and petite! This 19th century Parisian favorite is the perfect snack size. Shallow roots grow well in heavy soils and containers.
H • 65 days
#0011 $2.29 800mg (~410 seeds)

CAULIFLOWER
Brassica oleracea var. *botrytis*
Frost tolerant

Romanesco
This intriguing Italian heirloom delights with spirals of delicious lime green towers that will inspire even a finicky eater to try it.
H • 75–100 days
#0235 $2.29 1g (~240 seeds)

Snowball Y
Early maturing, 6" snow-white heads that can be harvested over a long period of time. Well-suited for short seasons.
70–80 days
#3183 Organic $2.49 750mg (~180 seeds)

Twister (hybrid) NEW
Self-blanching cauliflower with twisted leaves that form a protective shield against the sun. Heads are bright white and beautifully domed.
75–80 days
#0336 $4.29 20 seeds

CELERY
Apium graveolens
Frost tolerant

Utah
Garden-fresh celery is crisp, juicy, and flavorful. Leafy tops are delicious in soups.
H • 100–120 days
#3146 Organic $2.49 200mg (~320 seeds)

CHINESE BROCCOLI KAILAAN
Brassica oleracea var. *alboglabra*
Frost tolerant

Similar to broccoli, but with sweeter, more succulent flavor and better heat tolerance. Enjoy the tender leaves, stalks, and florets.
60–70 days
#0124 $2.49 750mg (~140 seeds)

COLLARDS
Brassica oleracea var. *viridis*
Frost tolerant

Georgia Southern
Although traditional in Southern meals, the frost tolerance of this variety means you don't have to be in the south to grow it. Leaves make great sandwich wraps!
H • 50–80 days
#0016 $2.49 3g (~580 seeds)

Chinese Broccoli
Chinese Broccoli is now an absolute must to grow in my garden! It grows so well here in my NC fall garden. And the taste is like a cross between broccoli and asparagus. It's insanely delicious! *– Sabrina, NC*

Roasted True Gold Corn

Corn

We cannot think of summer without the juicy sweetness of sweet corn on the cob, or enjoy autumn without the gorgeous, sunset tones of dried corn décor. Luckily, we don't have to choose because we can have them both! The three types of sweet corn (from sweet to sweetest) are **sugary** (su), **sugary enhanced** (se), and **shrunken/supersweet** (sh) and are defined by their sugar levels, tenderness, and how long they stay sweet. The two types of flint corn—Indian corn and popcorn—are recognizable by their dried, hard, often colorful kernels. Dent corn, which can be used to make corn meal, has a distinctive dimple or "dent" that appears in the outer edge of the kernel during drying. It, too, can come in stunning colors, making a gorgeous addition to your fall décor.

When to sow outside: RECOMMENDED. 1 to 2 weeks after your average last frost date, and when soil temperature is at least 60°F, ideally 65°–90°F.

Mini Guide to
Hand-Pollinating Corn

Hand pollination is a great tool to improve the production of your corn plants and, by extension, your harvest.

Rather than relying on Mother Nature to shake the plants and transfer pollen, you can quickly grab some snips and do it yourself in a few minutes!

Hand pollination of corn involves transferring pollen from the tassel—the structure at the top of the plant—to the silks—the stringy parts below. Aim to pollinate within ten days of the silks emerging to boost pollination rates.

Start by trimming one of the tassels at the top with pruning snips. Be careful not to shake the hanging anthers too much, as these hold the pollen.

Next, hold the tassel above the silks and shake vigorously to transfer the pollen. Each silk fiber corresponds to an individual kernel, so it's essential to spread the pollen as liberally as possible.

Finally, wait a few weeks for your delicious cobs to be ready for picking!

Check out corn-growing tips.

Corn
True Gold

True Gold (su)
Abundant, golden-yellow kernels with sweet, rich flavor. An open-pollinated selection from a 1955 variety.
70–80 days
#3004 Organic $3.49 8g (~45 seeds)

COVER CROP
Frost tolerant (unless noted)

Common Buckwheat
Fagopyrum esculentum
Frost sensitive
Sow in spring or summer. In just a few weeks, grow your own green manure for more productive, healthier soil. Great for controlling annual and perennial weeds. Quick to mature.
30–40 days
#7606 Organic Large $5.59 65g (Sows ~165 sq. ft.)

Crimson Clover
Trifolium incarnatum
Sow in spring or fall. A hardworking cover crop for your vegetable garden that fixes nitrogen for improved soil fertility. As an added bonus, the large, eye-catching, deep crimson flowers are beautiful, make delicious tea, and attract beneficial insects.
H • 70–90 days
#7280 Large $4.59 40g (Sows ~178 sq. ft.)

Hairy Vetch
Vicia villosa
Hairy vetch fixes copious amounts of nitrogen into the soil, improves the quality of the soil, and provides weed control with vigorous, dense growth. The flowers are a bonus for bees too!
H • 60 days
#7608 Organic Large $5.59 40g (Sows ~60 sq. ft.)

Soil Builder Peas and Oats
Pisum sativum, Avena sativa
Sow in the spring or fall. A dynamic duo of easy-to-grow field peas and oats that improves your garden's soil fertility and structure. Peas add nitrogen to the soil while fast-growing oats provide green manure.
50–70 days
#7609 Organic Large $4.59 65g (Sows ~80 sq. ft.)

Fava Bean
Vicia faba
Sow in early spring or fall. Fava beans are a dual purpose cover crop, having one of the highest nitrogen-fixing rates, and the large, deep roots break up even heavy and compacted soil. Dainty white flowers with black centers attract beneficial insects. Cold-tolerant.
30–60 days

Tasty Green Cucumber

Cucumber

Cucumbers can be classified into two categories, pickling and slicing types. PICKLING types are usually stouter and have drier skins that are ideal for absorbing pickle brine. SLICING cucumbers have thinner skins and longer fruit. Pickling cucumbers can still be eaten like slicers, and slicers can also be pickled.

Trellising cucumbers helps them grow straighter, makes them easier to see when harvesting, and provides good air circulation, which helps prevent mildew. Tie the main stem to the trellis to guide the plant. If preferred, cucumbers can also be grown on mounds. Mounds should be 4' apart with 6 seeds each, and thinned to 3 plants per mound.

When to sow outside: RECOMMENDED. 1 to 2 weeks after your average last frost date, and when soil temperature is at least 60°F, ideally 70°–90°F.

When to start inside: 2 to 4 weeks before your average last frost date. Cucumbers are sensitive to root disturbance; sow in biodegradable pots.

Nature's Promise

Botanical Interests Seed packets are nature's promise, encapsulating the potential for abundance and growth. Within their simple, unassuming envelopes lies the power to transform barren earth into a thriving garden. With each packet, a new chapter unfolds, as tiny seeds take root, stretch towards the sun, and blossom into vibrant, living beings. These unassuming packets hold the key to our sustenance for both body and soul. In them, we find hope, possibility, and the reminder that even the smallest of beginnings can yield bountiful rewards. – Lauren, VA

Lettuce

With lettuce in your garden, you can run outside for a quick salad from spring through fall—and it's a cinch to grow. **Butterhead**, also called Boston or Bibb, has soft, smooth leaves perfect for carb-free wraps. **Crisphead** is your familiar iceberg, which perfectly complements a BLT sandwich. **Mesclun**, literally means "mixture", creating a diversity of texture and color. Mesclun is harvested when young, and perfect for a multitude of culinary dishes. **Leaf** lettuce is soft, with a crisp rib. **Romaine** (also called Cos) lettuce is upright with broad, stiff ribs—the classic ingredient in a crisp Caesar salad. **Summer Crisp**, also called Batavia or French Crisp, forms a loose head with leaves that are sweet and crisp.

Lettuce seed requires light (sow shallowly) and cool to moderate soil temperatures to germinate, growing best in mild weather. Look for heat-tolerant varieties for fresh salads all summer long.

When to sow outside: RECOMMENDED. 2 to 4 weeks before your average last frost date, and when soil temperature is at least 40°F, ideally 60°–70°F.

When to start inside: 4 to 6 weeks before your average last frost date, and in summer when soil temperature is too warm (above 80°F) to germinate lettuce seed.

3 Tips for Lettuce-Harvesting

If you haven't tried growing lettuce in your garden, you're missing out! This crop is easy to grow and great for beginners. It matures quickly and makes a great companion for taller crops or vines. Plus, the leaves are so versatile in the kitchen that you'll never run out of ways to use your harvest!

When you're ready to harvest your delicious lettuce leaves, there are a few essential tips to follow to get it right:

Tip 1: The first is to understand the type of lettuce you are growing and how that impacts harvesting. Leaf lettuce, like the popular ***Salad Bowl*** varieties or ***Black Seeded Simpson***, can be harvested continuously throughout the season—a method known as cut-and-come-again.

Crisphead lettuce, on the other hand, is best left untouched until heads fully form for the best taste and texture. This includes varieties like ***Great Lakes 118*** that can be cut down completely at the base once the heads have formed.

Choose a head lettuce like ***Buttercrunch*** butterhead or ***Vivian*** romaine for the best of both worlds. You can harvest young outer leaves within a month after planting while waiting for the full heads to form. Better yet, grow them as tasty microgreens, ready to harvest in just a few weeks.

Tip 2: Whether you're harvesting a single leaf or a whole head, do so early in the morning. This keeps the leaves crisp and fresh, rather than waiting for midday when the sun and heat remove moisture and lead to wilting.

Tip 3: It's vital to watch temperatures and sun exposure around harvesting time. Temperatures above 80°F can cause the lettuce to bolt, negatively impacting flavor. It is better to harvest too early than too late to preserve the fresh and delicious taste we all know and love!

Hales's Best Jumbo Melon

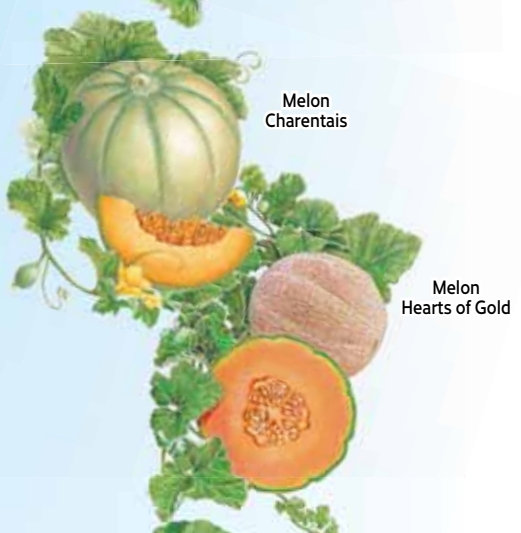

Melons

Imagine biting into a perfectly vine-ripened, highly aromatic melon at the peak of sweetness and flavor, so juicy that it drips down your chin and you don't even care! Melons flourish in the heat and use lots of water while growing (thus the unending juiciness). Melons also grow well on a trellis, which saves space and helps prevent disease. Did you know that what we call cantaloupes are really **muskmelons**? True cantaloupes are hard-shelled melons from Europe. **Honeydew** melons differ from muskmelons in that the skin is smooth, the flesh is green, and the scent is markedly different. We have some hybridized melons that will truly win you over!

When to sow outside: RECOMMENDED. 1 to 2 weeks after your average last frost date, and when soil temperature is 70°–90°F.

When to start inside: Recommended for short-season areas. 2 to 4 weeks before transplanting within 2 weeks after your average last frost date. Sow into biodegradable pots that can be directly planted in the ground; roots are sensitive to disturbance.

Microgreens

Microgreens are not just for chef-inspired plates—these nutrient powerhouses grow quickly right on your windowsill. Microgreens supply a very flavorful and condensed dose of vitamins, minerals, and phytonutrients—up to forty times as much as their mature counterparts. Grow them indoors at any time of year. Place the growing container on your dinner table along with a pair of scissors and let guests serve their own. It's like passing around a mini garden!

When to sow outside: Not recommended. Microgreens are fragile, and outdoor growing conditions make them difficult to clean.

When to start inside: RECOMMENDED. Sow indoors any time of year. For a continual crop, sow every 7 to 14 days.

Special sowing instructions: Use a shallow container with 1"–2" of fine, seed-starting mix. Sow according to each variety's seed depth and spacing recommendations on the packet.

Tips for Growing Delicious Microgreens

No salads, soups, or sandwiches are complete without nutrient- rich microgreens! While growing them is easy and beginner-friendly, ensure successful harvests with a few pro tips.

The process depends on which microgreens you'd like to grow. Some seeds require short periods of soaking and some none at all. A good rule of thumb: seeds with a hard coat, like sunflowers, cilantro, and beets, often benefit from a long soak. For most other types, it's an unnecessary step.

When selecting microgreens, consider flavor profiles. Many of our blends, like the Jazzy Mix, Umami Asian Blend, and Mellow Blend, provide a mix of different flavors. If you prefer single-flavor microgreens, we have those, too. One of our favorites for a crisp, peppery taste is Upland Cress.

Remember, our microgreens seed packets are filled with information about germination, growing, and plant care. Follow the included care tips, and you're on the way to delicious and nutritious greens!

Red Burgundy

Stunning color in the garden! Crimson pods and yellow flowers are prolific in the heat. Beautiful and edible.

55–60 days

#0263 $2.29 5g (~70 seeds)

The History of Okra

Okra is particularly popular in the southern parts of the United States—a fact that has as much to do with history as it does with climate.

Okra, a member of the mallow family, is cultivated for its edible seed pods and probably originated in West Africa, where it was grown by the ancient Egyptians and other cultures as a food crop.

Like many other cultural contributions, okra came to the United States under duress via the transatlantic slave trade. According to farmer and author Leah Penniman, kidnapped and enslaved people braided okra "seeds into their hair before being forced to board transatlantic slave ships, believing against the odds in a future of sovereignty on land." This act of hope in the face of inhumanity shaped Southern cuisine and farming.

Pickled or fried, okra can be eaten on its own but is also is a staple of soups as a thickening agent—think Créole gumbo, for example. While okra thrives in the heat of the South, it can be grown farther north with the aid of row covers. As a nitrogen-fixing crop, it enriches the soils where it is grown.

Get more advice on growing okra.

Bulbing Onions

Whether you're frying up onion rings or pickling them (recipe included inside 'Gabriella' seed packets), onions require special attention at sowing because their growth is triggered by day length (indicated by latitude). Therefore, you'll need to choose onion seeds based on where you live, allowing them enough time to grow before bulbing begins. Check out the map for easy location reference.

- **Long-day** (LD) varieties grow well in the northern latitudes, as they need 14 to 16 hours of daylight to trigger bulb formation.
- **Intermediate-day** (ID) varieties overlap the long and short day ranges a bit and cover the middle of the country. These varieties start the bulbing process with 12 to 14 hours of daylight.
- **Short-day** (SD) varieties are best sown in fall in the southern latitudes, for a late winter/early spring harvest or sown in early spring for small, early harvests in the North. These varieties need 10 to 12 hours of daylight to trigger bulbing. Depending on soil temperature, southern gardeners may choose to sow onion seeds directly into the garden. In the North, short-day onions may be started indoors and transplanted out in the spring, producing early, but smaller bulbs.
- **Sweet onions** generally have a limited storage life (1 to 2 months) compared to **storage onions**.

Gladstone Onion

When to sow outside: 4 to 6 weeks before your average last frost date, or as soon as soil can be worked; when soil temperature is at least 45°F. *Mild Climates only:* Late summer or early fall. Mid-October is the recommended, traditional sowing period.

When to start inside: RECOMMENDED. 10 to 12 weeks before your average last frost date. Transplant outdoors 4 to 6 weeks before your average last frost date. The earlier the start, the bigger the bulb. Ideal soil temperature is 60°–85°F. *Mild Climates only:* 10 to 12 weeks before your average first fall frost date. Transplant outside no later than 6 weeks before your average first fall frost date. Ideal soil temperature is 60°–85°F.

How to Start Onions in 6-Cell Trays

Want to grow tons of onions this season?
All you need to get started is one 6-cell tray and packet of your favorite onion seeds!

Onions are excellent crops for oversowing (particularly bunching types) to maximize space without compromising growth. There's no need to fill your greenhouse with rows and rows of seed trays. Instead, sow them all in one place to save space, time, and money!

Start by filling your 6-cell tray with an airy seed starting mix. Generously sprinkle your onion seeds over the soil, packing in ten or more seeds per cell. Finally, lightly cover with soil and water gently to encourage germination.

Depending on your chosen variety, you should see green growth emerge in just under two weeks.

Bunching onions like 'White Lisbon' or 'Italian Red of Florence' will be ready to transplant in around four weeks, while bulb onions like 'Texas Early Grano' or 'Cabernet' need an extra two weeks to develop larger bulbs.

When you're ready, remove the onions from your tray and simply rub between your fingers to separate them. Space according to packaging instructions and plant each onion individually.

Following this easy onion-starting method, you'll have a bounty of onions to enjoy and share with friends and family.

Get more tips on growing onions.

Peas

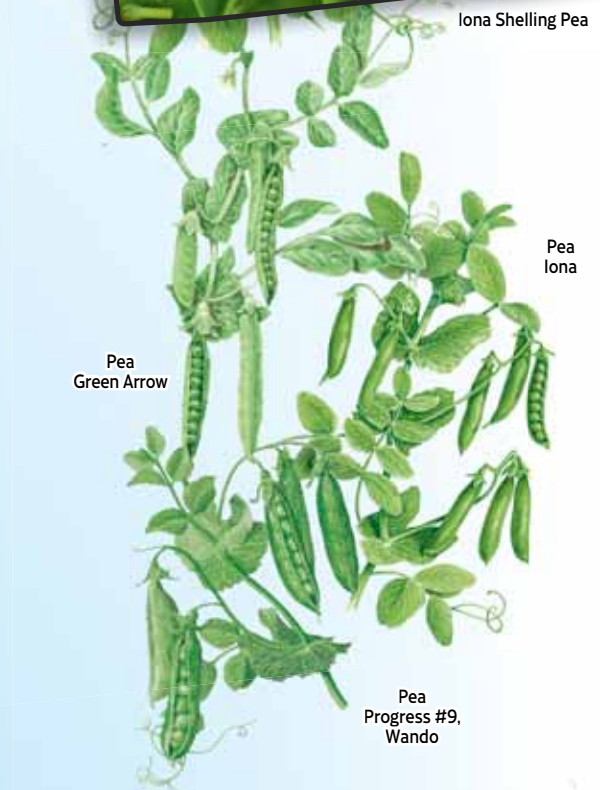

If kids turn up their noses at peas, it's because they've never had them freshly picked from the garden. With the crunchiness giving way to the sweetness, you'd almost think you were eating candy! **Snap** peas have both sweet, edible pods and tender peas so you can enjoy them whole! **Shelling** peas are grown for the fat, sweet peas that form in the pods (pods are not eaten) that are a staple alongside mashed potatoes. **Snow** peas have sweet, edible pods with very small peas inside, typically enjoyed in stir-fries and salads.

When to sow outside: RECOMMENDED. 4 to 6 weeks before your average last frost date, when soil temperature is at least 40°F, ideally 60°–80°F, and again 10 to 12 weeks before your average first frost date. *In mild climates,* sow in fall or winter for winter harvest. Best grown in temperatures lower than 85°F.

#3072 Organic $2.99 15g (~36 seeds)

Peppers

It doesn't get any better, or easier, than throwing peppers on the grill. The open fire chars the skin of sweet or chile peppers to a smoky perfection. And that's just one out of hundreds of ways to prepare this interesting vegetable. Capsaicin—the compound that gives chile peppers their heat—occurs mostly in the light-colored ribs (pith) inside the pepper. Contrary to popular belief, the seeds are hot only because they are in contact with the ribs/pith which contains the spicy capsaicin.

When to start inside: RECOMMENDED. 8 to 10 weeks before transplanting. Ideal soil temperature for germination is 70°–90°F. Transplant seedlings outside 2 to 4 weeks after your average last frost date, and when daytime temperatures are at least 70°F, and nighttime temperatures are at least 55°F. *Mild Climates:* Can also sow in late summer for fall/winter crop.

How to Interplant Raised Beds For **Maximum Yields**

Gardening in small spaces can require compromise on the plants you want to grow. But with the help of interplanting—planting two vegetables together (also known as intercropping)—you can make the most of your space and improve plant growth simultaneously!

Interplanting takes advantage of plant growth habits and harvest time to maximize yields. Rather than grouping the same plants, you fill tricky gaps, manage harvest times, and take advantage of the natural benefits of companion plants for a thriving and abundant garden.

If you live in a warm climate where leafy greens struggle, plant them at the base of taller vegetables like tomatoes and beans for shade.

These sun lovers protect your greens from scorching or bolting. Lettuce and other short-statured greens do their part as a living mulch, retaining moisture in the soil for thirsty plants like tomatoes.

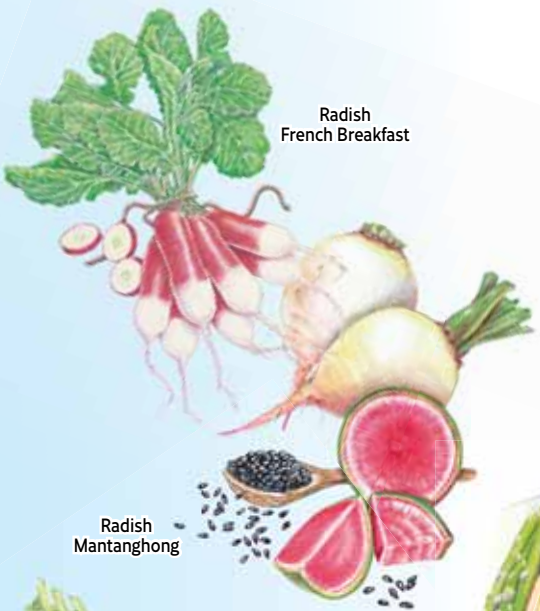

Maximize space above and below the soil by pairing root crops or deep-rooted plants with shallow ones. Carrots pair well with brassicas like broccoli or cauliflower, while spinach pairs well with trellised peas or cucumbers.

Fill empty gaps around slow-maturing plants with quick-to-harvest crops that you can pull early to limit overcrowding.

Radishes are great options for interplanting, with many varieties ready to harvest in just a few weeks! Try '***French Breakfast***' or the '***Easter Egg Blend***' radish varieties for versatile, tasty root veggies. Use radishes to fill spaces around your cabbage or corn while you wait for them to mature.

It's vital to ensure the plants you place next to each other make good companions. If your veggies work well together, you can look forward to a massive harvest, even in a small space!

Find out more about the science behind companion planting

French Breakfast
A favorite in Paris markets since the 1800s. Mild flavor. Withstands heat better than other radishes.
H • 28 days
#3008 Organic $2.99 3g (~210 seeds)

Family Favorites

I have ordered several varieties of Botanical Interests seeds over the last few years and they have all performed fantastically! My family's favorites are tomatoes, chives, peppers, and the cutest little carrots. This season we have tried spinach and the green beans for the first time and they are amazing. We have also gifted some of the Seed Collections paired with the Recycled Pots and they are a huge hit. I look forward to planning our garden for next year utilizing more of the Botanical Interests Seeds!

– Mollie, NY

Red Clover Sprouts

Sprouts

Sprouting seeds indoors is fun and fast. It can be done any time of the year for very nutritious, delicious sprouts! All you need is a Botanical Interests Seed Sprouter™ (or a container with a drainage lid) for twice daily rinsing. Great for beginners.

Fun—You can almost watch them grow!
Fast—Most sprouts are harvested in under a week.
Nutritious—Ounce for ounce, sprouts are much more nutrient-dense than their full-grown counterparts.

With so many flavors, textures, and colors to experiment with, sprouting seeds is a delicious adventure!

To ensure you are purchasing the safest possible sprouting seeds, a sample from each lot we receive is sent to an independent laboratory where it is tested for foodborne pathogens, including Escherichia coli (E. coli), Salmonella, Listeria, and Staphylococcus aureus (staph).

Adzuki Bean

Alfalfa

Bean Mix

Broccoli

China Rose Radish

Fenugreek

Garbanzo Bean

SPROUTING SEEDS

Adzuki Bean

Vigna angularis

Strengthen your body with this versatile, high-protein superfood. Healthful and delicious, its nutty flavor and crunchy texture give meals an enlivened makeover. In Asia, they are considered to be a "yang" (warming) bean that strengthens the body.

#7814 Organic Large $5.59 60g (~380 seeds)

Alfalfa

Medicago sativa

One of the most popular sprouts, and for good reason; alfalfa sprouts are high in nutrients, low in calories, and their nutty flavor and crisp texture make them delectable in salads, sandwiches, and dozens more dishes. No need for a lot of space or time; this is a "garden" anyone can grow in any climate, year-round!

#7801 Organic Large $5.59 30g (~12,670 seeds)

Bean Mix

Vigna angularis, Vigna radiata, Lens culinaris

A tasty, colorful trio of adzuki beans, mung beans, and lentils provides a mild flavor and pleasant crunch to salads and other dishes. A delicious source of protein and fiber.

#7812 Organic Large $5.59 60g (~720 seeds)

Broccoli

Brassica oleracea

So many health benefits in a tiny sprout! Broccoli sprouts are a powerhouse of vitamins, minerals, and antioxidants that may protect against many diseases. Their texture and spicy flavor enhance salads, sandwiches, casseroles, and even breads.

#7802 Organic Large $5.59 20g (~4,880 seeds)

China Rose Radish

Raphanus sativus

Pretty rose-colored sprouts are prized for their beauty, making an attractive addition to salads and sandwiches. Enjoy the spiciness of radishes in any other dish you sprinkle them on. High in nutrients, low in calories, and very easy to grow!

#7804 Organic Large $5.59 30g (~1,920 seeds)

Fenugreek

Trigonella foenum-graecum

Fenugreek sprouts with their nutty, maple syrup aroma add an exotic flavor to your meals, especially Indian cuisine. One of the oldest cultivated plants, the vitamin and mineral-packed sprouts, plants, and seeds have been enjoyed for millennia.

#7805 Organic Large $5.59 20g (~1,280 seeds)

Garbanzo Bean

Cicer arietinum

Oh so snackable! Also called chickpeas, the crunchy, nutty, little gems are high in fiber, protein, vitamins, and minerals. Their myriad of uses in salads, breads, pastas, soups, and dips will guarantee them a permanent place in your kitchen.

#7809 Organic Large $5.59 50g (~120 seeds)

Mung Bean

Vigna radiata

With crisp, tender texture and mild flavor similar to fresh garden peas, mung bean sprouts are a delicious addition to vegetable dishes, salads, and Asian cuisine.

#7800 Organic Large $5.59 60g (~580 seeds)

Purple Kohlrabi

Brassica oleracea

What vibrant color! Deep purple and green sprouts add fabulous eye appeal and crunch, not to mention an abundance of vitamins and minerals to make your sandwiches and salads special! All the flavor of the kohlrabi stem but milder in these little sprouts.

#7818 Organic Large $5.59 8g (~1,470 seeds)

Red Clover

Trifolium pratense

Crisp and crunchy, clover sprouts provide essential nutrients, including many vitamins, minerals, and antioxidants. Similar flavor to alfalfa, but red clover more easily sheds its hulls.

#7819 Organic Large $5.59 30g (~4,490 seeds)

Salad Mix

Medicago sativa, Trifolium pratense, Brassica spp., *Amaranthus hypochondriacus*

Add a spark of flavor and color to your salads! Our custom mix of alfalfa and clover combine with the tanginess of broccoli and kale for a full flavor experience, while the burgundy amaranth provides a pop of color.

#7813 Organic Large $5.59 30g (~4,920 seeds)

Sandwich Mix

Medicago sativa, Trifolium pratense, Raphanus sativus

Our own special blend for fabulous sandwiches! The mild flavors of alfalfa and red clover mixed with zesty daikon radish sprouts make this blend the perfect sandwich topper for an added zing and crunch.

#7803 Organic Large $5.59 50g (~9,120 seeds)

Ideal Light Conditions for Starting Sprouts Indoors

You can grow sprouts year-round, no matter where you live!

Like microgreens, sprouts offer nutrition in a condensed form, with many benefits in each bite.

Get the best results by providing the ideal lighting for your sprouts. No special lights or fancy equipment are needed; even a bright indoor kitchen counter can do the trick! In low-light conditions, plants will stretch toward the available light, resulting in longer sprouts.

Some varieties have different needs. Tiny seeds sprout better with indirect light. Larger seeds like mung beans are better off in dim light to darkness. If you're unsure about the best light for your chosen variety, remember that the seed packet has the pro tips you need to get it right.

Red Clover

Mung Bean

Purple Kohlrabi

Round Zucchini
Summer Squash

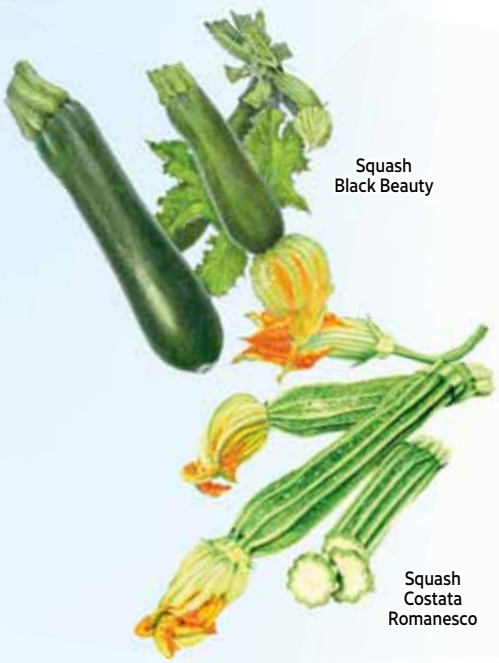

Summer Squash

We've all been tempted to secretly leave zucchini on our neighbor's doorsteps at night because we simply have too much. But that's why we love it! Summer squash is irresistible when it is seared in a pan of olive oil and salt, charred on the grill, or grated into your mom's famous zucchini bread (we have some recipes in our packets, too!). As one of the most productive plants in the garden, squash fruits are harvested during the summer when the seeds are small and soft, and the skin is thin and edible.

When to sow outside: RECOMMENDED. 1 to 2 weeks after your average last frost date, and when soil temperature is 70°–85°F.

When to start inside: Not recommended except in very short growing seasons, 2 to 4 weeks before transplanting. Roots are sensitive to disturbance; sow in biodegradable pots that can be planted directly into the ground. Transplant when soil temperature is at least 60°F.

How to ***Hand-Pollinate Squash*** in 3 Easy Steps

Explore more squash varieties and tips.

A lack of pollinators in your garden—whether due to declining populations or inclement weather—can quickly ruin a squash harvest. If your squash has masses of flowers but no fruit, it'as time to take matters into your own hands and become a pollinator yourself!

Squash hand-pollination is not a technical process and can massively improve your yields. You only need a small paintbrush and a flowering squash to complete these three easy steps.

1 *Identify male and female flowers*

Male flowers have straight stems and a center stamen that holds up the pollen-producing anther.

Female flowers have a bulge at the base of the flower (the immature fruit) and a stigma in the center.

Your plant needs both male and female flowers in bloom for successful hand pollination.

2 *Gather pollen from a male flower*

Dab your soft-bristled paintbrush onto the anther to collect the pollen. Don't worry about damaging the flower; male blooms won't turn into fruits.

If you don't have a paintbrush handy, you can also pick the flowers off the vines and pull back the petals to expose the stamen, turning the anther into its own paintbrush.

3 *Transfer pollen to a female flower*

Find a female flower and dab the paintbrush onto the stigma to transfer the pollen. If you're using a single male flower, hold it open above the female flower and tap pollen directly onto the stigma from the stamen.

Finally, sit back and wait for harvest time to enjoy the fruits of your labor!

Kurinishiki Kabocha Winter Squash

Winter Squash

On the coldest day of the winter, you can reach into your storage cellar and retrieve a hefty winter squash, fresh as the day it was harvested. Their long storage time means you can grow dozens in the summer and enjoy butternut squash soup, pumpkin chocolate chip cookies, and spaghetti squash "pasta" long into the winter. Most winter squash varieties enjoy rambling around the garden, needing plenty of space. But don't let that deter you! We have several **compact bush** varieties that can be grown in containers, and small spaces, too! Choose from **short** (up to 6'), **medium** (6'–10'), or **long** (over 10', some as long as 20') vine lengths in the cultivar descriptions.

When to sow outside: RECOMMENDED. 1 to 2 weeks after your average last frost date, and when soil temperature is 70°–85°F.

When to start inside: Not recommended except in very short growing seasons, 2 to 4 weeks before transplanting. Roots are sensitive to disturbance; sow in biodegradable pots that can be planted directly into the ground. Transplant when soil temperature is at least 60°F.

A wealth of Garden Expertise

Looking for some gardening guidance or inspiration?
Our Botanical Interests and Epic Gardening teams have you fully covered with insightful, creative, and fun solutions to all your gardening questions, quandaries, or curiosities!

Botanical Interests has a lot going on in the creative realm. We recently relaunched our YouTube channel (@botanicalinterests) with Angela K. Nickerson of Mid Modern Mama fame, and there are more collaborations to come! She's a Master Gardener with an informed perspective on zones, native plants, and sowing seeds, plus fun facts and information you can use immediately. In the future, you'll see even more faces join Angela in sharing great ways to grow!

Epic Gardening has a stellar YouTube channel (@epicgardening) founded by Kevin Espiritu that teaches the world to grow. Kevin started small, on an urban patio garden in San Diego. Today, he manages a full-blown urban homestead in the same city. He and other friends from the gardening world provide us with valuable information ranging from beginner to professional-level knowledge. Join over 2.5 million people and watch the YouTube channel, or explore the Epic Gardening Instagram, Facebook, or TikTok.

In addition, Kevin loves his homestead so much that he made a channel highlighting all the fun projects that go on there regularly. Check out the homestead's YouTube (@epichomesteading), or check in with him on Instagram. You'll learn so much from Kevin about all that goes into homesteading, including composting, chicken-keeping, and even a few pointers on food preservation.

Our resident garden hermit, Jacques Lyakov, is the obvious choice for gardeners who prefer a cottage garden style. On his YouTube channel (@jacquesinthegarden), he displays the lush and verdant landscape he's spent time cultivating. As a foodie, he also shares garden-fresh recipes that turn all that hard work into incredibly flavorful food. Jacques also has a wealth of information to impart via his Instagram.

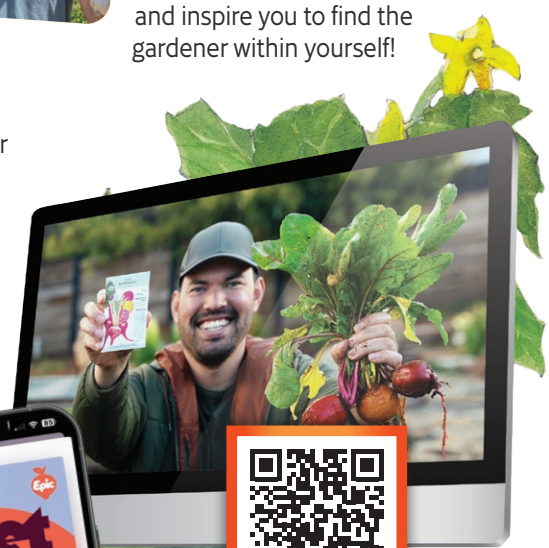

We have a podcast for those who prefer to listen rather than watch! The Beet is available in both audio and video forms. Explore topics ranging from basic gardening tips through houseplants or composting, or take deep dives into ecology, naturalism, soil science, foodscaping, water reclamation, and more. Whether you're experienced with gardening or just a nature lover, there's so much here to enjoy! You'll find the video version on YouTube (@thebeetpodcast) and thousands of audio podcast episodes on Spotify, Audible, Apple, iHeartRadio, or your favorite podcast app.

Of course, don't forget the in-depth information on our websites, botanicalinterests.com and epicgardening.com. Between both sites, we provide over 3000 in-depth articles you can use to level up your gardening skills and learn more about growing plants.

Our catalog and seed packets provide a wealth of information, but we have even more avenues to explore, all right at your fingertips. We want to share our passion and knowledge for plants and inspire you to find the gardener within yourself!

Want to see more from Epic Gardening? Visit our main YouTube channel!

Tomato

If you're a real tomato lover, picking a fresh tomato and eating it like an apple isn't unheard of, and that makes you our kind of people! So while we love all tomatoes, different types can fill a different purpose.

Determinate (Det., Bush) tomatoes ripen all at the same time so you can make all your sauces and salsas at once for preserving. They grow on compact bushes, so you may not need to stake these plants. **Indeterminate** (Ind., Pole) varieties usually grow tall, requiring support and produce fruit all season; therefore, you could use these tomatoes more regularly in salads and sandwiches. In between these two types is the **semideterminate** (Semi-det., Pole). As you might guess, they do both—produce a main crop that ripens at once, but also continue to produce up until frost.

When to sow outside: *For mild climates only:* 1 to 2 weeks after your average last frost date, and when soil temperature is at least 60°F.

When to start inside: RECOMMENDED. 4 to 6 weeks before transplanting. Transplant when air temperature is 45°F or warmer, usually 1 to 2 weeks after your average last frost date. Ideal soil temperature for germination is 70°–90°F.

Jacques' Cherry Tomato & Corn Pasta

Jacques paired our **Martian Jewels** sweet corn, ripe **Sun Gold** cherry tomatoes, **Red Pear** tomatoes, and flavorful alliums together to create a dish that highlights produce grown in the warmest time of the year. If you're not growing these varieties, don't hesitate to swap to your personal favorites. This one-pot meal is highly adaptable to whatever you have in your garden!

Ingredients:

- 2 pints of cherry tomatoes (Jacques used a mix of Red Pear and Sun Gold)
- 1 ear of freshly picked sweet corn (Jacques used Martian Jewels)
- 1 medium onion
- 5-6 cloves of garlic (to taste)
- Fresh basil (to taste, up to 1/4 c.)
- 8 ounces of pasta (choose something like a Campanelle that will hold onto the sauce)
- 4 cups of water (divided)
- 3 Tbsp olive oil (divided)
- Salt (to taste; Jacques used about a teaspoon to begin)
- Parmesan cheese (optional; for garnish)

Directions: Add 2 Tbsp olive oil to a deep saucepan and let it warm over medium-low heat. As it warms, slice your onion in half, chop off both ends, then finely sliver it into half-moons and add to the oil. Add salt over the onions to help draw out some of their moisture.

As the onions cook, roughly chop the garlic; when the onions turn translucent, add the garlic and give it a stir to combine. Shuck the sweet corn and cut the kernels from the cob. Once removed from the cob, add the kernels and the remaining olive oil to your saucepan.

Cut your cherry tomatoes into equal-sized pieces by halving or quartering them depending on their size. As you cut them, toss the cut pieces into your saucepan. Once the tomatoes are all cut, place a lid on the saucepan and cook over medium-low heat, stirring occasionally.

When the tomatoes have broken down, add 8oz of pasta. Choose a type like Campanelle or another shorter pasta that is easy to mix into the tomato-corn sauce and will hold onto the sauce well. Also, add 2 cups of water, reserving the remaining 2 cups for later (if needed).

Bring the contents of the saucepan to a full boil with the lid on, stirring occasionally to prevent pasta from sticking to the pot or burning. If the moisture reduces and the pasta is still not finished, add small amounts of water as needed to finish cooking the pasta.

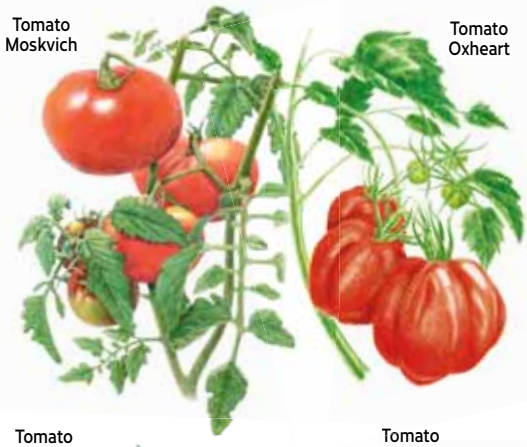

The sauce will naturally form from the pasta's starch and the corn's natural starches, creating a lovely, cream-like texture that will coat the pasta fully. As the sauce comes together, stack and chiffonade the basil, then add and stir the basil through once the sauce is ready to eat.

Serve it garnished with some parmesan cheese if desired!

Angela's Upcycled

DIY Planters

I am a fan of upcycling in the garden. I also love growing in BIG containers—especially on my patio. When I was looking for new containers for growing, I found 55-gallon steel barrels. They became the perfect upcycling project. Turning them into containers for growing was easy, inexpensive, and yielded great results. Each barrel can become two shorter planters or one taller planter.

Materials Needed

- 55 Gallon Barrel
- Water
- Bleach solution or other disinfectant
- Power Shears
- A Driver
- Tape measure
- Safety Glasses
- Leather Gloves
- 1" hole saw
- A lashing strap or painter's tape
- Optional: spray paint

Sourcing Steel Barrels

I found mine used online, but you can also check your local recycling center, food manufacturers, bottling companies, etc. Take care, however, as harmful chemicals are sometimes stored in such containers. Mine were $12 each and previously held fruit juice concentrate, so they were perfect for the garden. If you are cutting your drum into two planters, ask for lids and the rings that seal the lids to the drum as well.

1 Clean the Barrels

Using a hose and some water, clean out the barrels. Spray with disinfectant or bleach solution. Allow to dry fully.

2 Brace the Barrel

Since you are working on a rounded surface, bracing the barrel is a critical safety step. This could be as simple as having a friend hold the barrel. You will need a safe way to keep the barrel from rolling as you work.

3 Drill Pilot and Drainage Holes

For a Tall Planter:
Using the 1" hole saw bit, drill a series of 5 drainage holes in the bottom of the barrel. Skip to Step 5.

For Two Short Planters:
Using the 1" hole saw bit, drill a series of 5 drainage holes in the bottom of the barrel. Repeat for the top of the barrel. Measure the height of the barrel and determine the midpoint. Drill one pilot hole into the side of the barrel at the midpoint of the barrel. Attach the lid to the open end of the barrel.

4 Align the Guide and Trim

Stretch the lashing strap or painter's tape around the middle of the barrel. Insert the Power Shears into the pilot hole you drilled into the side. Cut the barrel in half using the guideline you just established. This cut will be somewhat jagged and wavy. Making the next cut should smooth that out. Move the lashing strap or use more painter's tape to mark a straight edge along which to cut for each barrel half. If your barrel has ridges, these may be helpful guides so that your edges are neat and even. Trim up the edges of each of the two planters with the Power Shears.

5 Spray Paint (Optional)

If desired, spray paint your barrels. I painted the first 6 inches inside each barrel, too, to give it a fresh, clean look.

6 Fill and Plant

Fill with your favorite peat-free potting mix and plant! I have grown ornamental plants, including dahlias and canna lilies, as well as tomatoes, lettuce crops, blueberries, and even spring-flowering bulbs in my barrels. They have enough volume for most plants to grow, but be sure to feed your plants and amend the soil each season.

Discover more from Angela on the Botanical Interests YouTube channel!

Please wear appropriate safety glasses and leather gloves and follow all recommended safety measures when using power tools.

Herbs

Lettuce Leaf Basil

Basil

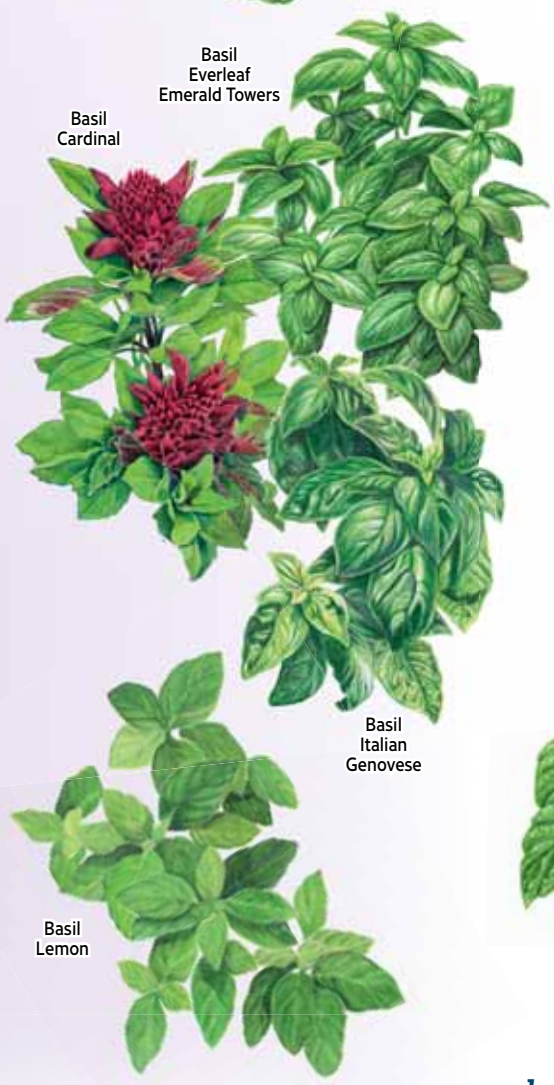

Tradition has it that if you give a sprig of basil to your beloved, they will fall in love with you forever. An aromatic and savory basil pesto dinner would surely do the trick too! And what's not to love—this traditional Italian herb has roots all over the globe in Thai and Greek foods, as well.

Once basil has 3 to 4 sets of leaves, pinch the top to encourage branching. Clip or pinch off flower buds as they form to maintain the best basil flavor. Basil can be grown inside in a bright, sunny window or under grow lights.

When to sow outside: 1 to 2 weeks after your average last frost date, and when soil temperature is at least 60°F, ideally 65°–85°F. *Successive Sowings*: We recommend 3 or 4 successive sowings every 3 weeks after initial sowing.

When to start inside: RECOMMENDED. 4 to 6 weeks before transplanting outside. Transplant when your nighttime temperatures are above 50°F.

Borage

> ***Borage***
>
> *One of my go-to pollinator magnets. I plant it in my vegetable garden to help increase pollination rates. Honeybees and our native bees love it! Plus, the dense plants shade the soil, helping to suppress weeds. Since borage likes to spread volunteers around the garden, I recommend cutting it back before it sets seeds.* – Cheryl, AB
>
> *With its attractive blue flowers, it's not only a favorite among your pollinators. Rich in antioxidants and essential fatty acids, this herb with a cucumber-like aroma makes a great addition to salads or beverages.* – Anja, CA

Cat Grass

Catnip

Chamomile

Botanical Interests has nurtured my love for nature through their extraordinary selection of seeds. From the vibrant colors of sunflowers to the delicate charm of chamomile, every plant tells a unique story of growth and beauty. I'm proud to be part of a community that fosters such a profound connection with the natural world. – Jeremy, Canada

CHAMOMILE

Matricaria recutita

German

Lovely, apple-scented flowers for soothing tea, potpourri, and dried flower arrangements. An easy-to-grow staple in any herb garden and terrific cut flower.

H • A F

#5028 Conventional $2.49 500mg (~6,320 seeds)
#6081 Organic $2.69 250mg (~3,160 seeds)

CHERVIL

Anthriscus cerefolium

An essential ingredient in French cooking, chervil provides a subtle flavor and aroma to many culinary dishes.

H • A F P

#5029 $2.29 1g (~350 seeds)

CHIVES

Common

Allium schoenoprasum

Beautiful, edible flowers and delicate, onion-flavored foliage. Very easy to grow in the garden or container.

H • P F P W

#5031 Conventional $2.49 800mg (~470 seeds)
#6062 Organic $2.69 500mg (~290 seeds)

Garlic

Allium tuberosum

Leaves, flower buds, and flowers have a delightful, mild, garlic flavor. Easy to grow, good for containers, and can also be grown indoors!

H • P F P W

#5030 $2.49 600mg (~120 seeds)

CILANTRO | CORIANDER

Coriandrum sativum

Long Standing Santo

Both foliage (cilantro) & seed (coriander) make this herb one of the most useful and tasty. Slow to bolt.

H • A F P

#6028 Organic $2.49 3g (~190 seeds)
#7751 Organic Large $5.59 10g (~620 seeds)

Moroccan

Coriander lovers, this is the one! This fast-growing, quick-to-bolt variety produces extra-large, full-flavored seeds that are ideal for homemade ground coriander. Classic cilantro leaf flavor, too.

A F P

#5015 $2.29 4g (~270 seeds)

DILL

Anethum graveolens

Bouquet

Early, large seed heads with robust flavor make 'Bouquet' dill an excellent pickling spice. Plant extra for the swallowtail butterflies!

H • A F

#6030 Organic $2.49 3g (~1,560 seeds)

Tetra

This bushy variety of dill is slow to bolt and heat tolerant, resulting in more fresh leaves throughout the season. Attracts swallowtail butterflies and other beneficial insects.

A F

#5047 $2.29 3g (~2,160 seeds)

FENNEL
Foeniculum vulgare var. *azoricum* (unless noted)

Dragon (hybrid) NEW Online • Catalog EXCLUSIVE
Foeniculum vulgare
'Bulbing Dragon' reliably produces large, aromatic "bulbs" ideal for braising, deep-frying, or adding raw to salads for a refreshing crunch.
P F
#5018 $4.29 25 seeds

Finocchio
Grown as a vegetable for the sweet, licorice-flavored "bulbs" or as an herb for the delicately flavored foliage and aromatic seeds.
H • P F
#5032 $2.29 1g (~120 seeds)

Romanesco USDA ORGANIC
Larger, more uniform "bulbs," and delicately flavored foliage. Developed for cool, northern climates with good bolt resistance.
H • P F
#6129 Organic $2.69 500mg (~60 seeds)

FEVERFEW See pg 62

LEMON BALM
Melissa officinalis

Relax on a hot summer day with a glass of iced, lemon balm tea. Enjoy the delightful scent in the garden. USDA ORGANIC
H • P F P
#6078 Organic $2.49 200mg (~270 seeds)

Vanilla white, fluffy, fragrant blossoms and silvery-green foliage make 'The Bride' an elegant addition to a cut flower garden.

A F W 32"–36" tall

#1360 $2.29 200mg (~37 seeds)

Growing Ammi—
Entices Beneficial Insects

In the summer and fall veggie garden, a well-rounded grow is all about the umbels of Ammi!

This carrot family member is known for its power to lure in predatory wasps, pirate bugs, and syrphid flies. Therefore, Ammi's lacy-looking bloom is the perfect accompaniment to growing food. Ornamental gardens benefit, too!

From the pink and purple flushes of 'Dara' to the well-known white umbels of 'Green Mist,' you'll stave off all kinds of pests. Eggs, larvae, and adult aphids won't have a chance, nor will many nightshade-loving moths.

After the growing season, use Ammi in fresh or dried flower arrangements to enjoy its delicate splendor all year. Clip the blooms when they're 80% open to extend their vase life.

'Dara' and 'Green Mist' bring the same elegance of Queen Anne's Lace to the garden without the invasive growth. For those who love compound blooms, this is a great choice.

Check out more about attracting beneficial insects to your garden!

BEE BALM
Monarda sp.

Blooms summer. Attracts pollinators.
Edible flowers.

Lambada
This garden treasure is a delightful combination of lavender flower clusters and the pleasant aroma of mint- and basil-scented leaves. Unique cut flower.

Our Favorite Flower Varieties to ***Promote Biodiversity***

Biodiversity—the variety of living organisms—is on the decline. Fortunately, gardeners have an opportunity to slow the effects of urbanization, climate change, and habitat loss by planting species that provide a rich supply of pollen and nectar.

Planting with biodiversity in mind can significantly help bird, insect, and mammal species by providing critical habitat and food sources. The more gardeners manage their own small-scale ecosystems, the more significant the impact we have!

If you'd like to help, check out some of our favorite flower varieties that attract pollinators, restore habitat, and feed wildlife:

Penstemon, ***columbine***, and ***wild bergamot*** are hummingbird magnets. Wild bergamot is also a host plant for the wood nymph butterfly! ***Statice*** attracts hoverflies that feed on aphids for natural pest control.

Cosmos flowers bring butterflies, bees, wasps, hoverflies, and more. ***Blue grama grass*** and ***sunflowers*** produce seeds for birds. Herbs, like Dill, boost biodiversity by attracting beneficial predator wasps. ***Common milkweed*** provides both food and a habitat for the Monarch butterfly. Butterflies love it so much that it earned the common name butterfly flower! ***Echinacea (coneflower)*** and ***black-eyed Susan*** are native species that, along with ***zinnias,*** attract masses of butterflies to your backyard.

Many of these species support native bees, too! Fit in as many species as you can for maximum impact. A varied garden significantly increases biodiversity while improving overall look and performance. As you build your own thriving ecosystem, you'll see an explosion of life that extends far beyond your garden!

Find out more about attracting pollinators to your garden:

COREOPSIS

Blooms summer to frost. Attracts pollinators.

Double Sunburst

Coreopsis lanceolata

Plant some sunshine in your garden! This water-wise beauty tolerates poor soil and blooms for a long time. Deer-resistant to boot!

P F W 18"–24" tall

#1009 $2.29 800mg (~260 seeds)

Incredible! Swirl

Coreopsis tinctoria

The colorful, swirling blooms atop this wispy, delicate plant make for an "incredible" cut flower! You'll love how easy it is to grow. It is a quick and easy grower that draws an abundance of butterflies and bees.

A F P W 3'–4' tall

#1349 $2.49 50mg (~150 seeds)

Plains Coreopsis

Coreopsis tinctoria

This prairie wildflower sports sunny yellow blooms with mahogany centers that call out to pollinators. Blooms and delicate foliage bring movement to beds and bouquets.

Coreopsis Plains Coreopsis

Coreopsis Incredible! Swirl

Corn Striped Japonica

Cosmos Apricotta

Cosmos Candystripe

Cosmos Bright Lights Blend

Cosmos Bright Lights Blend

I can't say enough about these easy-to-grow plants and bright flowers. I scattered the seeds in bare areas and between plants and they germinated quickly. The plants are covered with flowers that bob gently in the breeze. They make good filler plants because the airy foliage doesn't take over or block surrounding plants. The bold yellow/orange flowers are stunning and the butterflies love them too! Grow well in dry clay soil and full sun. Just keep deadheaded and the plant blooms and blooms. – Nancy, FL

A F 16"–32" tall
#1407 $2.29 250mg (~60 seeds)

Grow Your Own Sponge!

If you're looking for something unique to plant in your garden, you can't go wrong with luffa!

This fascinating gourd, botanically named *Luffa aegyptiaca*, produces fibrous fruits that can be dried to form a sponge for all the scrubbing needs around your home.

As a subtropical plant, luffa is best planted in the spring and enjoys warm temperatures and high humidity. Give it plenty of sun and moisture throughout the season as you wait for the exciting moment when fruits develop.

When the skin turns yellowish brown and starts to dry out, the fruits are ready for harvest. It's best to give your luffa a little time to finish drying out once you've harvested them.

Peel back the skin, shake out the seeds, and leave the fibers to finish drying for an almost endless supply of home sponges!

Read more about growing Luffa.

HOLLYHOCK

Alcea rosea (unless noted)

Blooms summer. Attracts pollinators.

Chater's Double Blend

Tall, elegant spires of gorgeous peony-shaped double blossoms look outstanding against a fence or wall.

H • B F W 5'–8' tall

Brilliantly colored, daisy-like flowers atop sparkling, succulent foliage, thus the name Sparkle Blend. Heat- and drought-tolerant garden performer.

H • A F W 4"–8" tall

#1309 $2.29 250mg (~640 seeds)

Using Tall Flowering Plants In Landscaping

Landscaping with tall flowering plants can instantly transform your garden.

Whether you need to cover an unsightly fence, provide shade for shorter perennials, or create a focal point that draws the eye upwards, there are many beautiful plants to choose from!

Tall perennials like **delphinium** and **hyssop** can be used as a backdrop in mixed borders. The long blooms stand out among other plants and create visual depth that adds interest to the space.

Hyssop is also a pollinator magnet, attracting hummingbirds, bees, and butterflies to your backyard for a buzz of activity.

Take advantage of the impressive height of **hollyhock** or **ornamental millet** to create a colorful privacy screen that separates areas of your garden. You can also use them to cover unsightly garden objects or fences with a striking mass of color.

Height is essential when transforming your garden into an oasis. Tall plants can reduce wind and dampen sound. Choose sturdy plants with dense leaf growth or stake them to help them withstand the elements.

Tall flowering plants are also valuable in cut flower gardens. **Larkspurs** come in stunning colors, beloved by florists for their commanding presence in a vase.

Take advantage of tall plants' benefits in your garden to take your landscaping to the next level!

Get more tips on growing tall and colorful hollyhocks!

IMPATIENS

Impatiens walleriana

Blooms spring to frost.

Midnight Blend (hybrid)
Masses of dazzling, velvety, gemstone-colored flowers will turn any dark dreary corner into a bed of luxurious color all summer long!

Marigold

There are many different species and cultivars of marigolds. **African** marigolds (also called American or Aztec) are some of the largest. **French** marigolds have smaller, double blooms on small, bushy plants. **Signet** marigolds have petite, single flowers with fine, lacy, lemon-scented foliage. Many marigolds are edible and have a spicy, tarragon flavor.

When to sow outside: 1 to 2 weeks after your average last frost date, and when soil temperature is 70°–80°F.

When to start inside: RECOMMENDED. 4 to 6 weeks before your average last frost date.

How African Marigolds Repel Root-Knot Nematodes

Planting African marigolds near tomatoes and other plants doesn't immediately eliminate the root-knot nematodes that attack them. The truth is more complicated (and beautiful). While marigolds produce alpha-terthienyl, a substance that repels nematodes and soil-borne diseases, it takes time to have an impact.

Keep planting African marigolds for all the benefits they provide your garden, but be patient; it's a slow process! After planting, they don't immediately protect against nematodes, but they will protect next season's soil. You can even plant marigolds as a cover crop to ensure root-knot nematodes don't inhabit roots in the following season's bed.

In the meantime, marigolds will do their work as a trap crop for aphids, spider mites, and other insect pests. Plant one or two a season before planting your tomatoes, and you're bolstering growth a year in advance!

Find out more ways to combat root-knot nematodes.

Monarchs and Milkweed

Attract gorgeous butterflies to your garden! Because milkweed is a host plant for the monarch butterfly throughout the Western U.S. and Canada, you'll observe the life cycle of the monarch (Danaus plexippus) by growing this plant. Monarch caterpillars feast exclusively on milkweed (Asclepias spp.) foliage as a defense mechanism; the toxins in the plant render them distasteful and even poisonous to predators. Milkweed flowers are also valuable to other pollinators, too, including native bees, honeybees, bumblebees, Sphinx moths, and hummingbirds.

When to sow outside: 2 to 4 weeks before your average last frost date, or fall for spring germination. Benefits from stratification (cold, moist period).

When to start inside: 6 to 8 weeks before your average last frost date.

Milkweed:
What else does it attract?

We know Monarchs benefit from milkweeds planted in the garden. But did you know there are other boons associated with this interesting and toxic plant?

As a host plant, it's one that larval insects feed upon to reach their pupation stage. During pupation, they transform into the lovely butterflies that flit around the garden space. Yes, milkweed hosts Monarchs, Milkweed Tiger Moths, and Queen butterflies. Milkweed plants feed many other insects, acting as an essential part of the food web.

Bees (bumble bees, carpenter bees, sweat bees, plasterer bees, leaf-cutting bees, yellow-faced bees), sphinx moths, and skippers all consume the nectar of these plants. This nectar sustains them through the seasons to carry on their legacy into next year's growing season.

Aside from hosting the species of butterflies mentioned, milkweed provides food for other Lepidoptera. Swallowtails, Fritillaries, and Hairstreaks enjoy milkweed nectar in spring, summer, and temperate fall seasons. Milkweed is a viable predatory insect attractant. Syrphid flies love to feed on milkweed nectar. They control aphid and ant populations, warding them off your nearby veggie garden.

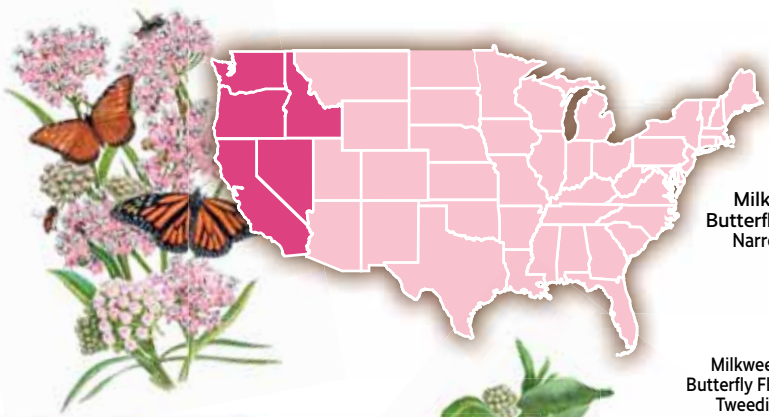

Just one milkweed plant is an ecosystem in and of itself. Milkweed bugs eat milkweed aphids as well as the plant's sap. This results in less aphid damage on a thriving milkweed. Aphids are also a food source for late-stage Monarch larvae who consume them for a little boost to reach pupation.

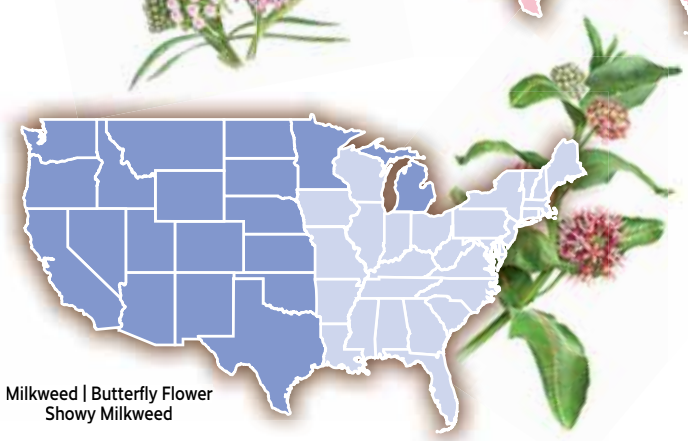

Planting milkweeds native to your region gives you a little glimpse into the complexity of the surrounding ecosystem. This will also support native wildlife habitats, including any migrating species of butterflies who happen to make their way through your locality. 6 varieties of milkweed await you!

#1086 $2.29 2g (~60 seeds)

Peach Melba Nasturtium

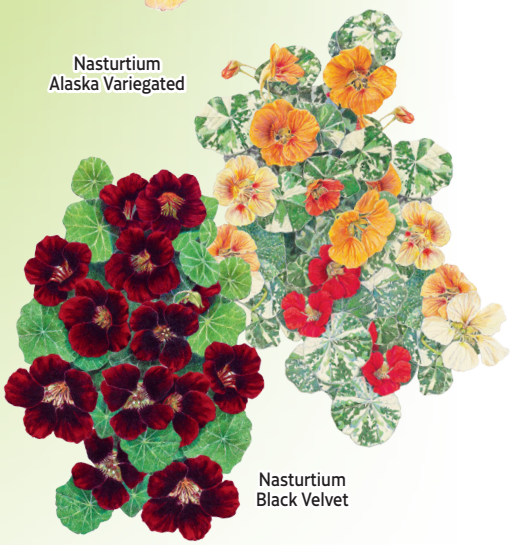

Nasturtium

The botanical name, Tropaeolum, comes from the Greek word for 'trophy', in reference to its shield-shaped leaves. The common name, nasturtium, comes from nasus and tortus, roughly translating as 'nose twister' due to the plant's pungent scent and peppery taste. During WWII, nasturtium seeds were used as a pepper substitute. President Jefferson grew nasturtium at Monticello, and ate the pickled seeds, which make a great substitute for capers.

When to sow outside: RECOMMENDED. 1 to 2 weeks after your average last frost date. *Mild Climates:* Sow in fall for winter bloom. Ideal soil temperature for germination is 55°–65°F.

When to start inside: Not recommended.
2 to 4 weeks before your average last frost date. Roots sensitive to transplant disturbance; sow in biodegradable pots that can be directly planted in the ground.

Wintertime Ritual

Many gardeners partake in the wintertime ritual of sitting down with a seed catalog during the off-season and pouring over pages of potential. Botanical Interests catalogs, much like the seed packets themselves, are filled with pages of botanically stunning drawings to inspire your future garden. The information provided along with the variety to choose from makes selecting seeds a joy rather than a task to check off of the gardening to-do list. – Kelli, CO

California Poppy

It's easy to understand why Spanish explorers nicknamed the poppy-covered California landscape, "Land of Fire." These native North American wildflowers put on an exceptional display when grown in mass and in wildflower plantings, bringing the landscape to life. Fluttery blossoms open in the sunlight and close with cloud cover or nightfall.

California poppies are so easy to care for, too, as they are drought tolerant and deer resistant. Perennial in USDA zones 8–10; in other areas, grown as an annual that often reseeds, returning every year.

When to sow outside: RECOMMENDED. 4 to 6 weeks before your average last frost date, when soil temperature is 50°–60°F, or early to mid-fall for bloom the following spring. *Mild Climates:* Late summer to early fall for winter and spring bloom.

Statice: Your Secret Anti-Aphid Weapon

Add an extra punch of protection to surrounding plants with statice! The small blooms of this annual or perennial plant attract syrphid flies, bees, and butterflies. Say goodbye to aphids and ants and hello to lovely light pink, fuschia, and purple blooms.

The 'Russian' and 'Cotton Candy' Blends bring a soft, papery texture to flower arrangements. The tall, slender stems produce long-lasting blooms in summer that act as companions to your veggie garden. Cottage gardens also benefit from the variety of hues these plants produce.

The blooms are perfect for the coast or even areas prone to drought. Grow the Russian variety to add pops of pink to your landscape, or sow bunches of the Cotton Candy Blend for multicolored clouds of minute yet abundant blooms in shades of periwinkle and lavender.

This plant is vigorous! Its petals last all summer and bring you joy in warm seasons.

Sunflower

The majestic sunflower, arguably the most recognized "American" flower, displays a perfect and intricate symmetry that will inspire you to pause and admire. Native Americans were the first to domesticate sunflowers to have a single large blossom and a variety of seed colors. Sunflowers are an excellent food source for bees, and birds flock to the seed heads in fall. Even pollenless varieties have nectar for pollinators. Whichever variety you choose, your garden will be even sunnier for it.

When to sow outside: RECOMMENDED. 1 to 2 weeks after your average last frost date.

When to start inside: 2 to 4 weeks before your average last frost date. Sunflowers are sensitive to root disturbance, so they are best sown in biodegradable pots that can be planted directly in the ground. Sow single-flower varieties every 2 to 4 weeks to extend the bloom period.

Mammoth Sunflower

I was looking to create a quick privacy screen and the sunflower did the trick! Planted seeds in a row and staked as they grew. As the leaves filled in, they grew to about 9 feet tall and created our own private backyard. The whimsical flowers brought loads of yellow finches that were a delight to watch as we sat outside. Putting up a fence is not an option, so this is a great alternative. The stems will be cut up and worked into the compost pile in the fall. – Nancy, FL

Sweet Peas—Deer-Resistant Pollinator Plants

Nothing says spring is here like sweet pea flowers!

These deer and rabbit-resistant pollinator attractants come in an array of pleasing colors you can enjoy in the garden or flower arrangements. The deep maroon blooms of 'Beaujolais' pop among their green foliage.

If you can't decide, try a blend to pepper your growing space with purple, crimson, white, and pink petals. Choose from varieties with longer vines that extend gracefully along garden borders and rock walls, or pick shorter plants that fit into hanging baskets and containers.

The robust fragrance of 'High Scent's' white blossoms is a match for more sense-oriented gardeners. You can count on visits from honey bees, bumble bees, and even wild bees when you plant sweet peas.

All of these are essential to your ecosystem and any nearby food plants you're cultivating. Enjoy these blooms through summer and save the seeds for next season, or let them self-sow and reappear in the coming spring.

Check out more deer-resistant plants.

Violas:
Frost-Ready Favorites

Do you need a colorful and cheerful flower that can bridge the seasons? Violas, known for their adorable "faces" and sweet scents, are the perfect hardy perennial for the cooler temperatures of spring and fall. In warm zones, they can flower throughout the winter!

While these whimsical blooms shine in the garden, they are edible, too. Use them as a garnish in salads, or candy them for decorating cakes and cookies.

Over time, violas will reseed to create a sweet patch in your flowerbed. These gently mounding plants make a beautiful ground cover and look charming growing beneath taller perennials in a mixed border. Plant them in spring for fall blooms, or sow in fall for an early spring flush.

These little flowers come in nearly every color of the rainbow! Here are some of our favorites:

Johnny Jump-Up This classic tricolor viola is easy-care and self-sows to create mini-meadows of purple, yellow, and white in the garden. They have a pleasant and mild wintergreen flavor!

Cool Summer Breeze Larger than your average viola bloom at nearly seven centimeters across, 'Cool Summer Breeze' is the perfect addition to dainty summer bouquets. This variety comes in cute combinations of violet-blue, yellow, and white.

King Henry This striking viola is a deep, velvety purple that pops in the landscape. Each individual bloom has a golden eye, lavender highlights, and black whiskers. Try it to anchor a bed of floaty pastels or add elegance to baked treats.

Corsican Violet This wild Mediterranean violet handles the heat better than other viola varieties. Drought-friendly and reliable, plant it in a rock garden or patio container for lush, pale purple blooms with white whiskers.

We think more violas are a good thing, but if you don't like where these beauties pop up, they transplant easily. Simply dig them up and put them wherever your garden needs a little boost.

Giant Purple Zinnia

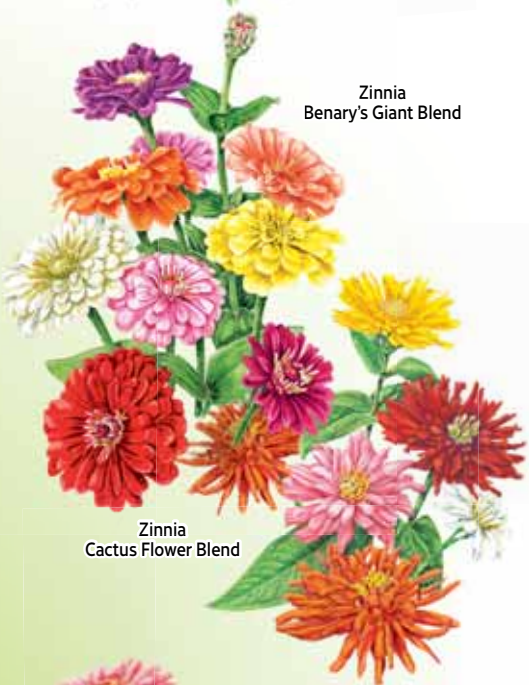

Zinnia

With a diversity of colors—bold, vibrant, pastel, white and even green—and plant sizes—short, medium, or tall and stately—there is a zinnia to please everyone. Some varieties boast such large blooms, one flower will fill your cupped hands! Zinnias will always catch the attention of passers-by, and stop you in your garden tracks. It did not start out that way, as the zinnia of the wild was nondescript; it was not a garden success until the mid-19th century. Named for Dr. Johann Gottfried Zinn who wrote the first description of the flower, years of breeding brought striking new colors, shapes, sizes, and growing habits to the once humble zinnia. Zinnias retain their color and beauty for a very long time in fresh or dried flower arrangements.

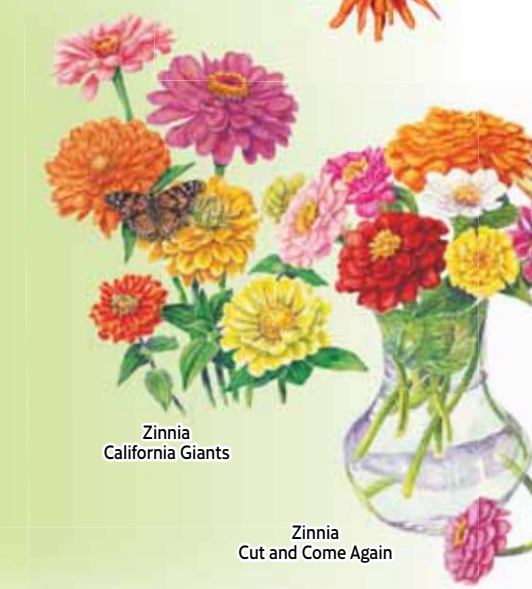

When to sow outside: RECOMMENDED. 1 to 2 weeks after your average last frost date.

When to start inside: 4 to 6 weeks before your average last frost date. Transplant outdoors after last frost. Zinnias do not benefit from being planted early; wait for warmer weather.

Introducing the next generation of the Birdies Metal Raised Garden Beds you know and love. Our strongest, most durable garden beds yet—featuring stainless steel hardware and new reinforced bracing.

- Easy square-foot dimensions in feet and inches for easier garden planning.
- New reinforced bracing kits with additional vertical and horizontal support to keep your bed perfectly upright.
- Aluzinc Steel is 7x more corrosion and rust-resistant than regular galvanized steel, lasting 20+ years in your garden.
- 100% Food-Safe materials and non-toxic USDA-approved paint that never leach chemicals into your soil.
- Easy-to-assemble and customizable thanks to a modular design, allowing you to easily build the perfect raised bed for your garden.
- 100% exclusive Epic Gardening design, so you can rest assured you support the original creators.

Orders >$49 ..... FREE*

*AK/HI/PR have special rates

** Rates are subject to change without prior notice.

5 Reasons to grow in Raised Beds

Birdies™ Garden Products

Raised beds have exploded in popularity in recent years, and for good reason. This garden trend comes with a host of impressive benefits, not just for your plants but for you, too.

First and foremost for many is **accessibility**.

Gardening is hard work, and a full day of digging, planting, and weeding can put severe strain on your knees and back (not to mention the stiff muscles the next day). Tall raised beds make plants much easier to access, limiting this strain and making gardening more enjoyable.

Lifting your plants off the ground brings them closer to you and offers extra **protection from damage**.

Whether you have curious pets that like to dig up seedlings or problems with soil-borne pests, your precious plants will remain out of reach. This includes protection from accidental damage from foot traffic or stray garden tools.

If **soil health** is a concern in your garden, raised beds can resolve your problem in an instant. No more soil tests, constant amendments, and pest and disease issues—you have complete control. Fill your beds with the ideal soil mix for your chosen plants, and you can tick soil off your 'to fix' list.

Raised beds also improve **drainage**, keeping excess moisture away from the roots and improving airflow—no more worries about unexpected rain or accidental overwatering.

Finally, you can't forget about the **aesthetic benefits** of a raised bed garden. Available in a range of shapes, sizes, and colors, you can curate a tidy space that matches your style with limited maintenance.

With so many benefits for you and your plants, it's easy to see why raised beds are a game-changer in the garden!

Rewarding to grow from seed. Sow these low-maintenance, prickly desert gems, and let yourself be surprised by the dazzling shapes that emerge. Naturally slow to germinate, but once established, this interesting mix of six desert varieties will practically grow themselves! Enjoy watching succulent, water-storing stems and impressive geometric shapes form into one of the longest-living plants on earth. page 56

650+ seed varieties • 230+ certified organics • 300+ heirlooms
